Hiring Manager

Software Development Team

Dear Hiring Manager,

I am writing to express my interest in an entry-level Software Developer position at your organization. As a Master of Computer Applications (MCA) student at R.S.M.T College, Varanasi, with a Bachelor of Computer Applications background, I have built a strong foundation in software development and am eager to contribute my skills to a dynamic engineering team while continuing to grow as a developer.

Over the course of my academic and self-directed projects, I have gained hands-on experience across the full development stack. I built a College & School Management System using ASP.NET Core, Entity Framework Core, and SQL Server, implementing role-based authentication and CRUD operations across multiple modules. I also developed a Real-Time Chat Application using Django Channels and WebSockets, and a Student Management System built with Django REST Framework to expose secure, role-restricted RESTful APIs. These projects have given me practical exposure to designing data layers, building APIs, and implementing authentication and access control in real-world scenarios.

In addition to my project work, I completed intensive workshops in Machine Learning, where I trained a loan eligibility prediction model, and in advanced front-end web development. I am proficient in C#, Python, Java, and JavaScript, and comfortable working with tools such as Git, GitHub, and Postman. I am particularly drawn to opportunities that let me deepen my expertise in .NET and REST API development, and I am confident that my problem-solving ability, adaptability, and collaborative approach would make me a valuable addition to your team.

I would welcome the opportunity to discuss how my background and enthusiasm for software development align with your team's needs. Thank you for considering my application; I look forward to the possibility of speaking with you further.

Sincerely,
Aditya Pandey
